

ECS Installation at GOSSEN METRAWATT

The factory of GOSSEN METRAWATT in Nürnberg is equipped with a complete energy control system, consisting of a summator network with connected energy and consumption meters. The following energy types are measured:

- electricity 62 meters
- heat 1 meter
- water 3 meters
- compressed air 2 meters

All data stored in the summators are transmitted in the night via a modem connection to our provider in Berlin. The next day they can be accessed over the Internet for analysis and billing purposes.

EMC Demonstration – Channel Assignment

For a clearer overview the EMC software demonstration only represent measuring values from the main distribution. The indication of the different channels are listed in the grey fields.
